

Aluflam is a family-owned business established in 1943 with more than 25 years of experience in fire-rated glass and aluminum construction. We offer a wide selection of fire-rated constructions, from fire-resistance classes EI30 to EI120, such as facades, windows, doors, sliding doors, skylights, and glass roofs. Our designs range from standard to more complex, specially designed systems. We are constantly developing new products, and now with our Extrusion line in Lithuania, we can make customized solutions.

Aluflam works closely with architects, contractors, and building developers throughout the entire process, from the planning phase and delivery to the installation of the finished product.

For many years, Aluflam has played an active role in developing solutions to fire technical challenges for hospitals, schools, care homes, museums, other public buildings, hotels, office buildings, and other similar locales.
