

ALUBEL
TRA
TERRA
E CIELO

ALUBEL, THE STUFF DREAMS ARE MADE OF.

Born from a strong instinct of the founding partners at the end of the 80s, today Alubel is a benchmark in the market of roof systems and façade claddings. Technological innovation, exemplary quality standards and a surprising ability to combine state-of-the-art visions with the solidity of craftsmanship skills are the distinguishing features of this group whose vast and updated range of products encompasses a multitude of roofing and cladding systems as well as soundproofing and insulating solutions for the industrial, civil and public sectors.

NUMBERS OF A LEADER

1958

the year the Alubel-Fibrotubi group was founded. Alubel, as a result of the lucky foresight of its founders, made its debut right from the start anticipating the times by creating the metal roof market, and anticipating what Italy would need now it was starting along the path of full recovery. Since then, innovation has been a part of our DNA.

28

is our number one. Created in 1989, it is an ideally profiled sheet, perfectly balanced between resistance and attractiveness. But that's not all! It is also one of the first complete systems that comes with a whole range of accessories to realise stylistically expressive finished products. Imitated but inimitable, it is our long seller par excellence and available today also in the Tek 28 and Tek 28 Flat versions.

100.000

are the square metres on which the group's production facilities stand, tangible proof of the solidity and reliability of this entrepreneurial organisation. 40,000 of them are covered space. Occupied by Alubel manufacturing systems of course!

200

are our employees. A team that goes way beyond a number written on paper: a close-knit team of highly specialized professionals that have all the aspects of the production line completely covered – from research to design up to the realisation of each finished product.

more than 100.000.000

are the millions of square metres of covered space the world over with our materials and products. A number that makes your head spin, comparable to about 14,300 football pitches or 80,000 Olympic swimming pools. But the most interesting piece of information is that behind these numbers there are thousands and thousands of customers who we have been alongside in all corners of the planet, helping them transform their projects into reality.

EVERYTHING STARTS WITH THE CUSTOMER.

Values count too, not only numbers: rules that guide our work towards maximum customer, designer, architect and entrepreneur satisfaction. Our path always begins by listening and interpreting what the customer needs, up to the choice of the most suited product plus continuing support also after the project has been completed.

**The customer is at the centre:
from the big company,
to the home owner.**

Our products are designed to meet the needs of specific and different sectors: industrial, public and residential. Alubel is organised to offer its maximum both to big companies, medium and small enterprises and to private customers, thanks also to the Alubel Point stores which can be found nationally and internationally.

A well-structured, innovative and updated range that can always give you the right solution..

Today Alubel offers a comprehensive range of products, encompassing many different types of roofing systems and claddings as well as specific soundproofing and insulating products. Supporting the designer and the end user and helping them in their choice, selecting the solution that is most suited to their particular needs is an integral and fundamental part of our business.

The added value of our service. To accompany, guide, help.

From free inspection and estimate, to advisory and designing services, up to the metal flashings division that supports the customer to ensure a perfect result: all the activities we do to guarantee the best possible experience to our customers are numerous, precise and specific to accompany them along the path that begins with the project, extending to implementation and way beyond, with protracted warranties that can reach up to 50 years on certain products.

CHOOSE ALUBEL. 7 KEY ADVANTAGES.

Attention to the customer and the categorical aspiration to constantly raise the level of global quality is also proven in a specific array of advantages that translate into concrete, solid and tangible values for all our customers.

1. Warranty up to 50 years.

All our products come with a warranty. For certain specific materials we have managed to extend this warranty to 50 years, unequivocal proof of the quality and reliability of the materials.

2. Measures to render asbestos safe and its disposal.

Alubel has studied specific products that today are among the best solutions available in the market for replacing or covering fibre-cement sheets. With the collaboration of the best installers, Alubel also supports the customer in rendering safe and managing asbestos.

3. Energetic requalification.

The energetic requalification of buildings is a hot topic, the subject of state incentives in Italy and in the world. Alubel has studied specific products that tangibly improve the energetic class and can also contribute to obtaining such incentives.

4. Eco sustainability and making ready for photovoltaic panels.

Alubel roofs are recyclable, sustainable and easy to dispose of. Ad hoc solutions have also been studied to better support photovoltaic panels with extreme ease and in complete safety.

5. Compliance with anti-seismic directives.

Alubel panels and roofs are a valid solution when seismic regulations for industrial sheds and residential/production buildings have to be complied with. The materials used are in line with existing directives and standards.

6. Weather resistant.

The characteristics of the Alubel roof systems are ideal for guaranteeing optimum performance even in areas where the climate is particularly subject to downpours and wind.

7. Excellent compatibility between the accessories used for completion.

An extra advantage is the wide variety of accessories and solutions proposed to complete projects, such as connecting elements, gaskets and seals, eaves channels and other metal flashing elements, ensuring excellent compatibility between the different construction systems.

PRODUCT RANGE

A brief description of the solutions is given here to help the customer find his bearings among the proposals. See the relevant material for more detailed technical information.

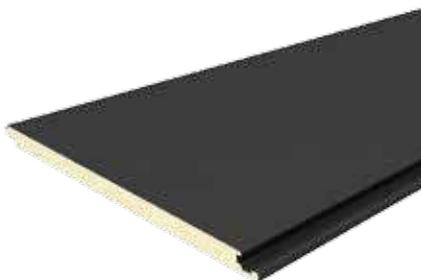

CORRUGATED SHEETS

A wide variety of corrugated metal sheets, available in different shapes and with different technical characteristics that distinguish them.

INSULATED SANDWICH PANELS

These are the famous sandwich panels, self-bearing, thermally and acoustically insulated that mean they can be used to cover the majority of construction types.

FAÇADE CLADDING

Alubel does not just offer a wide range of roofing products but also solutions for cladding façades to give your company a brand new image.

Vast, complete, updated. A range of products that is always up to the task. Alubel proposes to designers, engineers, entrepreneurs and all other customers, a selection of products that is able to meet all their requirements in terms of technology, resistance, energy saving, appearance, eco sustainability and compliance with the relevant standards. The products are available in various colours and materials.

COPPO ROOFING LINE

Alubel's Coppo line is the innovative range of solutions created to do away with the limits of traditional tiles and curved tiles.

FLAT ROOFS

Alubel has created and patented a roof that can be installed even with no slanting, always guaranteeing impermeability and waterproofness.

CURVED ROOFS

Also in the case of curved roofs, Alubel has developed a series of technologies for curving and adapting products to the geometry of the roof.

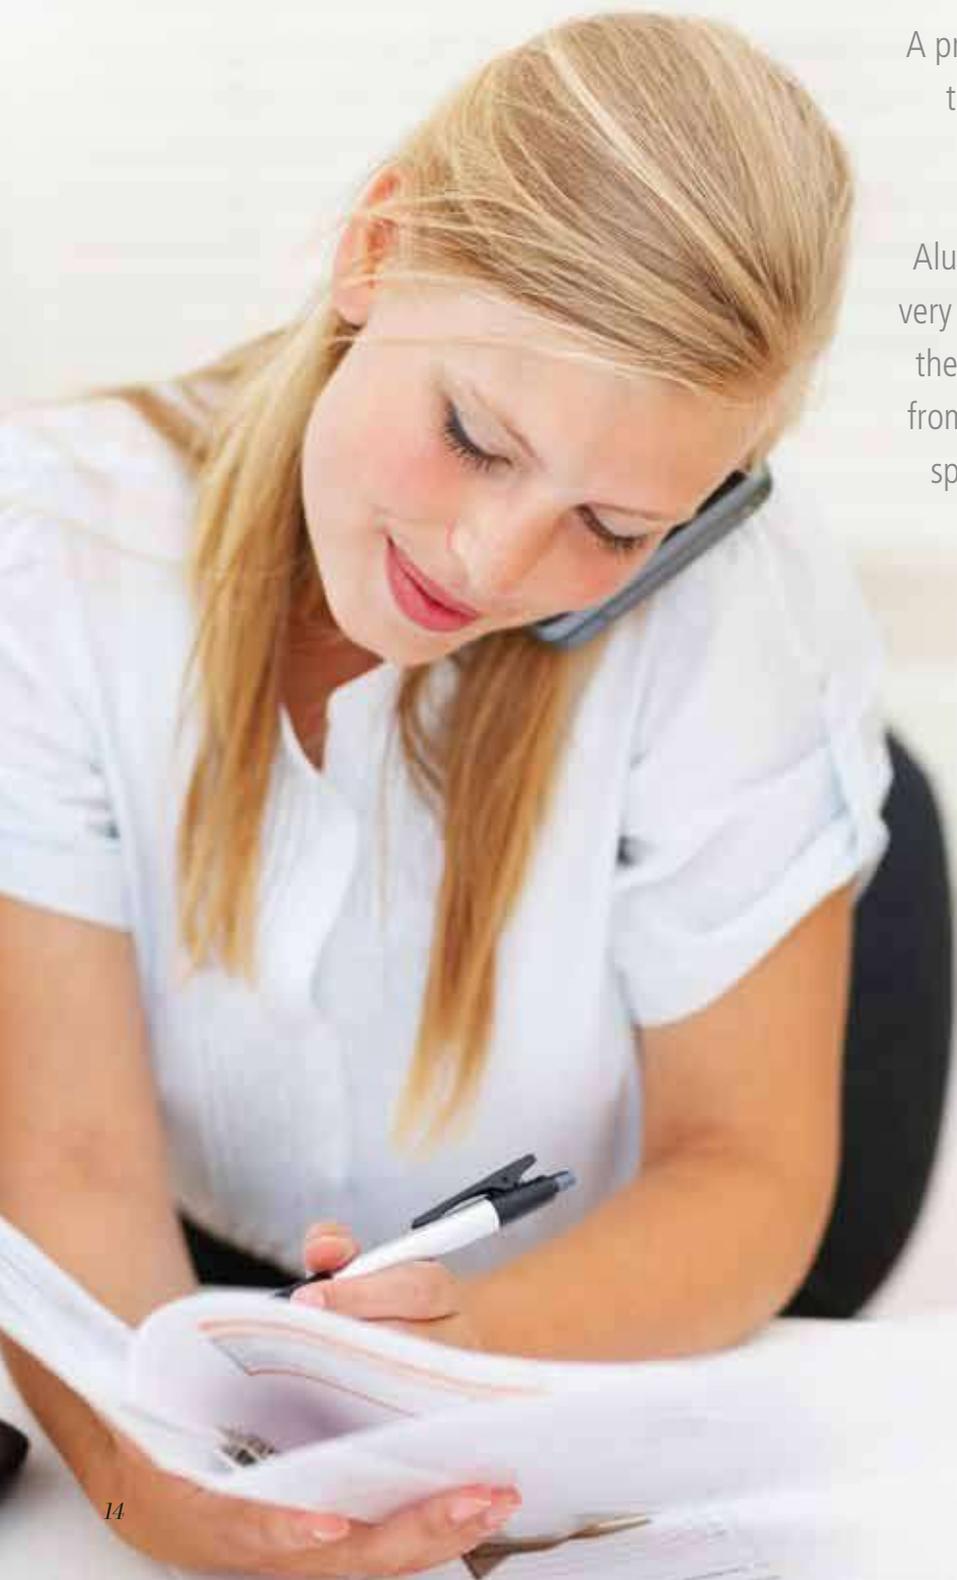

THE ADDED VALUE OF OUR SERVICES

A proposal of products and accessories that is vast and well-structured with different genuine and appreciable advantages. Alubel is all this and more: to offer the very best to all our customers, who play the leading roles in the process which, from the design, goes on to after sales, specific and highly qualifying services have been prepared and perfected.

- 
- Direct contact with reserved mailing.** We have set up a reserved mailing service for supporting and contacting the customer: an easy, quick and direct way to ask for clarifications, verifications, estimates or anything else, receiving surprisingly quick answers.
 - Advice on the choice of materials.** A good project starts with the right choice. For this reason, Alubel offers technical support to its customers when choosing the material most suited to the job in hand which is based on what it is used for, the objectives one wishes to attain and many other factors.
 - Designing service.** We have always been ready to collaborate with architects, engineers and designers and today we are offering a service to whoever intends consulting us right from the project phase to get the most from our solutions.
 - Internal Metal Flashings Division.** Accessories, special pieces and completion elements necessary for finalising a project are designed and made inside the company by a dedicated division, perfectly consistent with the product lines. To guarantee the customer has a global and complete solution, right down to the smallest finishing detail.
 - The practicality of the Alubel Points.** The Alubel Points are stores primarily dedicated to immediate residential or small and medium enterprise needs. In each Alubel Point it is possible to find products that are immediately available from the warehouse, avoiding the usual technical times normally needed for production to order.
 - Large crane-equipped vehicle fleet.** Alubel has a large fleet of vehicles driven by qualified staff and equipped for perfect installation of the materials. Hence our products are delivered directly to the customer and, if necessary, raised overhead without the need for any external structures and at no extra cost.
 - Objective: zero maintenance.** The technical and qualitative characteristics of the Alubel roof system considerably reduce the need for any real maintenance. In fact for certain products maintenance is zero.

WORKS COMPLETED

With the widest range of products in the market Alubel has, during its lifetime, covered and cladded countless buildings, including of architectural value, agricultural and civil buildings.

Ricci Mobili, Bologna, 7,000 m²

FAQ. THE ANSWERS YOU'RE PROBABLY LOOKING FOR

Do you only work with
multinational corporations and big companies?

Alubel boasts references that include leading industrial corporations from all over the world. But the group's philosophy is inspired by satisfying any customer: there is no such thing as customers who are too small or second class. Representatives of multinational corporations, owners of a SME or private home owners always find a willingness to help, expertise and advice tailored to their objectives.

Aluminium or other materials?

Alubel always recommends using aluminium: but having said this, each choice has specific advantages based on the objectives and end use. Get in touch, we'd be pleased to give you advice about your objectives.

Are the people mounting your products qualified?

For years Alubel has been working exclusively with the very best installers: qualified people who guarantee the highest possible quality standards. Because installation is the most important part to get the most out of our products.

Why do you talk about roof systems and not just panels?

Alubel studies complete and integrated systems which go beyond the concept of single panels: even the connecting elements, gaskets and seals, eaves channels and all the other metal flashing elements are designed specifically. So we can offer a finished project, with high performance and consistent from an aesthetic viewpoint. In particular, Alubel 28, Tek 28 and Tek 28 Flat are a perfect example of a roof system.
