

THOSE WHO
REALISE DREAMS
ARE SEEN

ALDOWA
LEAVE YOUR MARK

DREAMS ARE MEANT TO COME TRUE

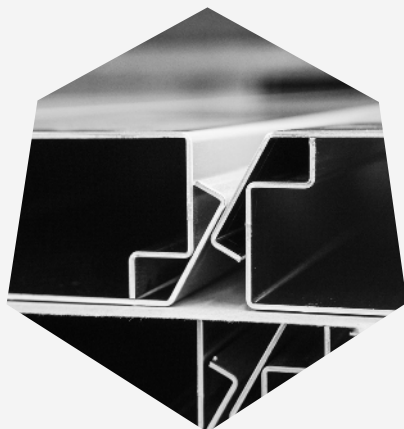

Remarkable lines, exceptional architecture, illustrious facades: whatever you dream of, we make the wildest ideas real and workable. No assignment is too big, and no idea too complex. We combine expert knowledge with a creative team spirit, whereby we like to push the limits of technology, materials and architecture a little. If it's never been done before, that does not mean it cannot be done. Exceeding expectations is what we love.

Those who realise dreams are seen.

OUR APPROACH ARRANGED, FROM A TO Z

ASSEMBLY**

WE MAKE YOUR IDEAS A REALITY

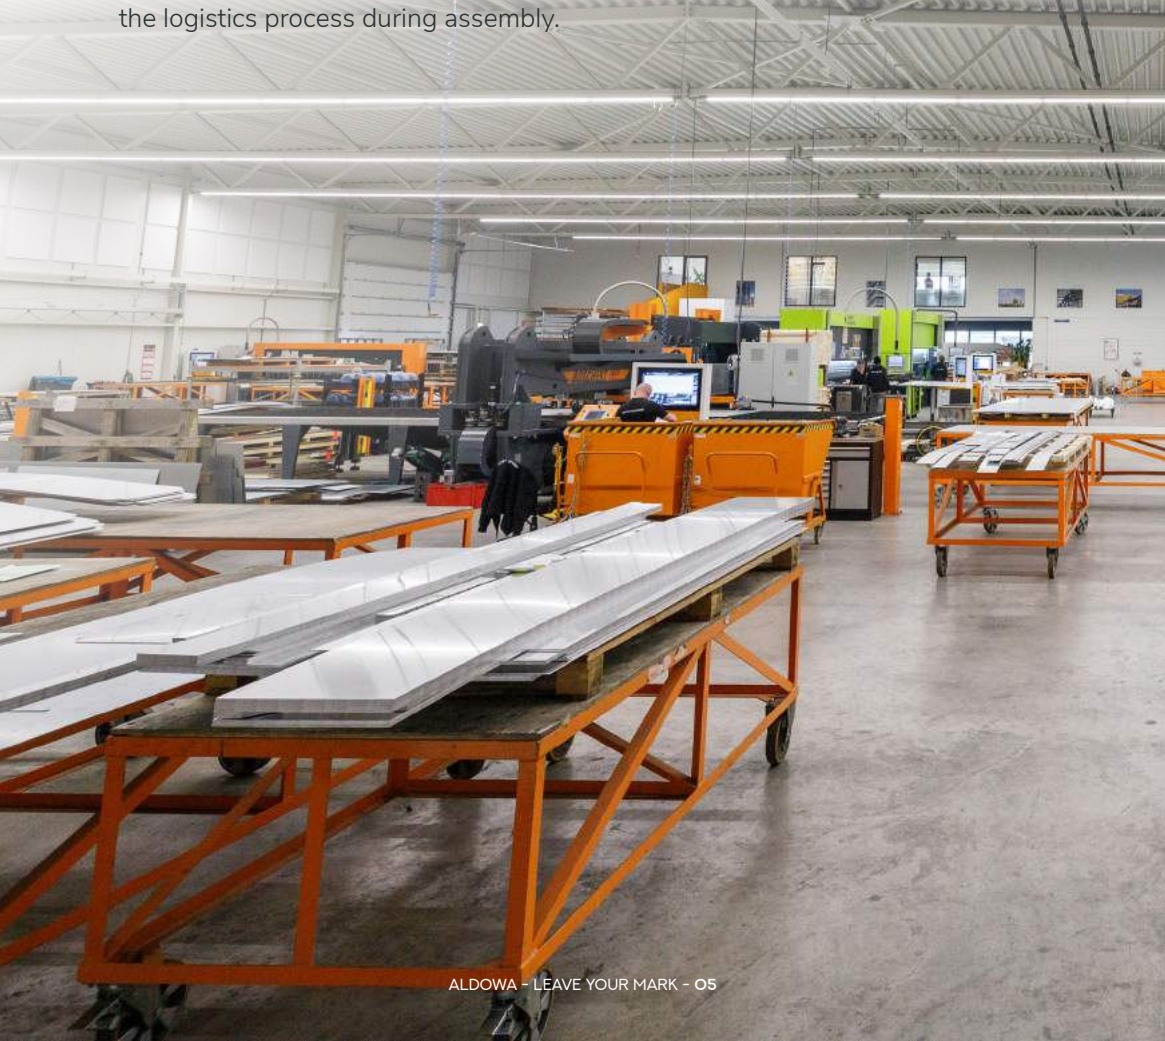

We see it as our challenge to make the biggest ideas tangible. No concept is too complex, no job too big. In our Experience Center, we can surround ourselves with materials and techniques and enter into a brainstorming discussion with our clients. Our construction-skilled engineers translate your dream into a powerful design and a manufacturable product. Using parametric modelling and 3D engineering and with a keen eye for detail, lines, aesthetics, architecture and manufacturability.

We like to make ideas tangible. A mock-up is an essential part of the design process, because it allows you to see as many parts of the building as possible. In this way, we clarify the challenges in the preliminary phase.

COMPLEX AND BESPOKE

At Aldowa, we have been producing and machining metal since 1978. That's what you call extensive experience. Naturally, we have state-of-the-art machinery, but we are especially proud of our craftsmen. With their knowledge and experience, they can make the most complex shapes in metal. From our four production locations with a combined surface area of no less than 10,000m², they produce the most iconic landmarks.

Our fitters are also part of the project team from the start. For instance, they are already thinking about safety measures on site and the logistics process during assembly.

CORPORATE CULTURE COMMUNICATION IS KEY

At Aldowa, we don't like bureaucracy. We do like openness, direct communication, an inspiring working environment and a lot of personal responsibility. In this open culture, every employee comes into his own in his own way. The effect? More job satisfaction, extremely low absenteeism, great team spirit and good results.

LANDMARKS TO BE PROUD OF

Throughout Europe, you can find iconic landmarks for which we were asked to create the exterior or interior facade. Each landmark tells its own story and is equally special to us.

Admire our landmarks:

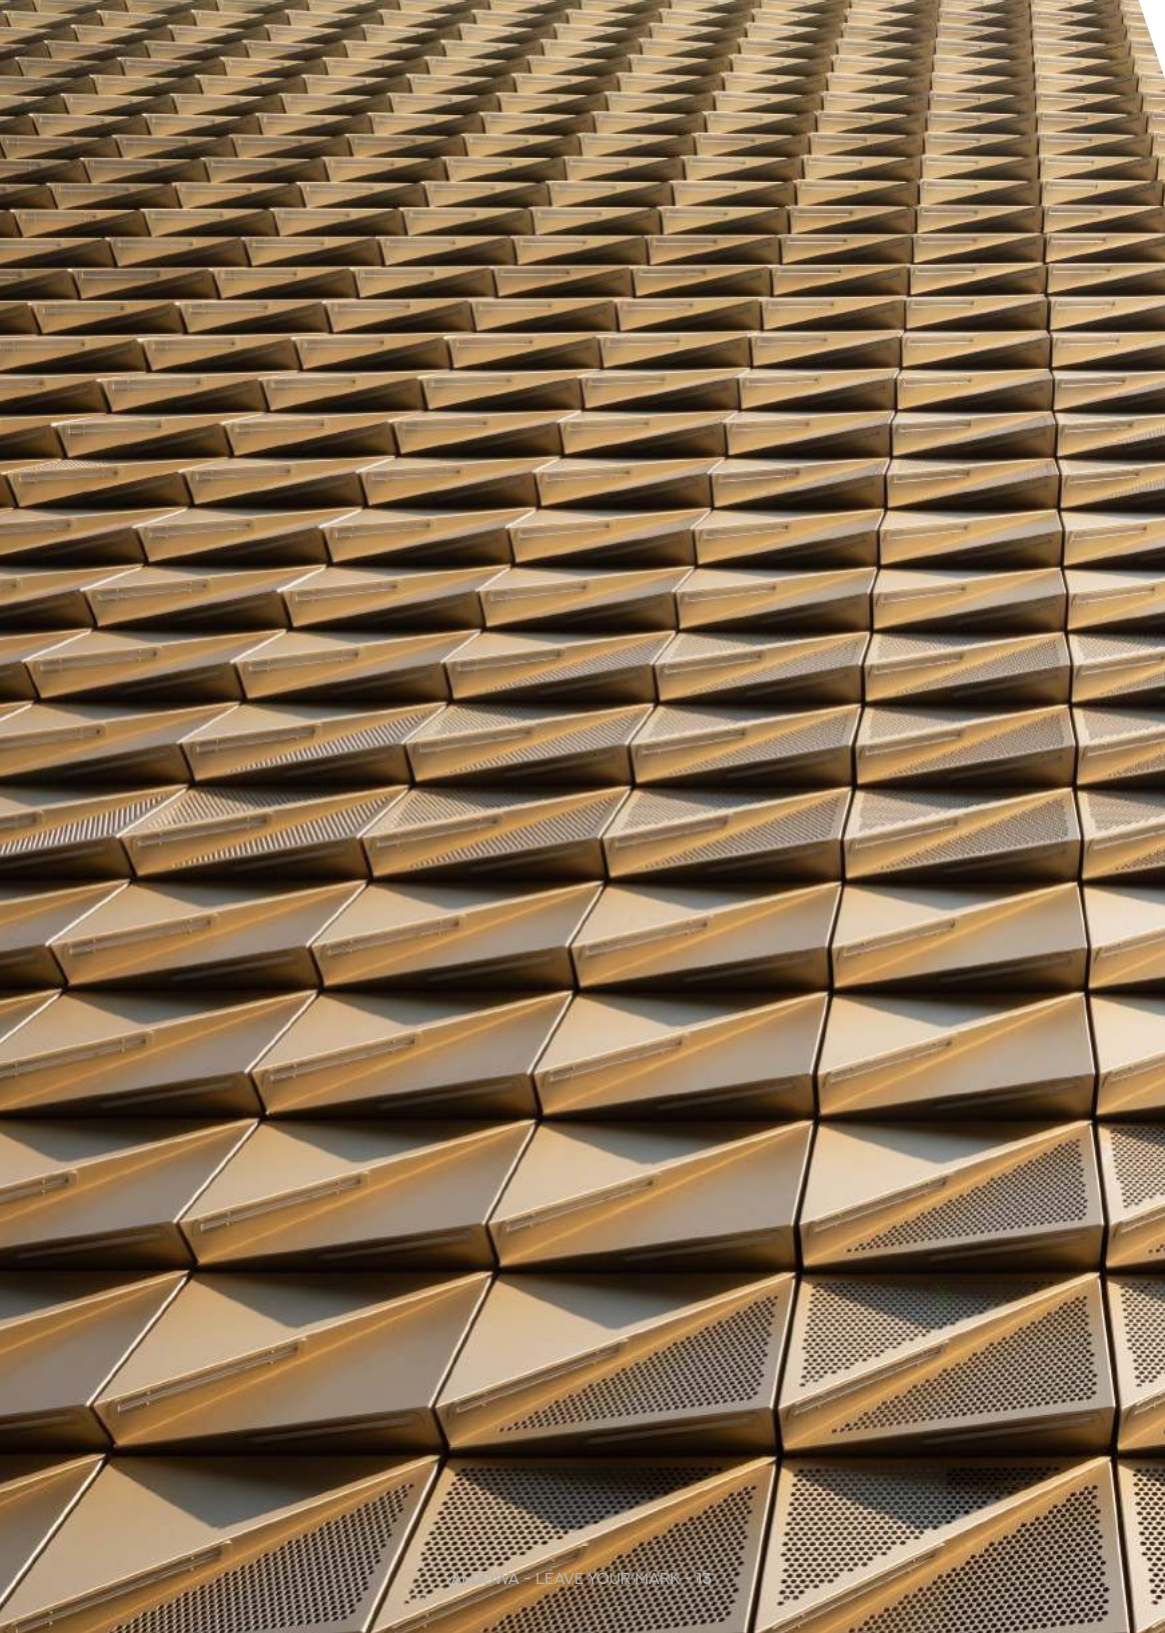

ALDOWA GREEN

Worldwide, we see that the desire for climate-neutral buildings is growing. Climate requirements are also becoming increasingly strict. For this reason, we established Aldowa Green in 2019. A division in which sustainable aesthetic innovation is paramount. In addition to creating the technical design and installation of vertical plant walls, we can integrate full-color solar panels in many shapes and sizes into the facade. Furthermore, we are working on the “heat-win facade,” which allows us to supply a building with both heat and cold. We are also collaborating on multiple platforms to apply building-integrated PV installations on a larger scale.

COLLABORATING WITH ALDOWA

Collaboration is a basic requirement for an outstanding end result. Aldowa works with regular partners for colouring or installing our structures, for example. Whether it's the material, transportation, surface treatment or assembly, we work with long-term relationships. We challenge one another to think differently and find ever more efficient solutions together. In that way we inspire and strengthen one another.

Aldowa has a close relationship with several universities. We share knowledge and insights with talented future facade engineers and develop our landmarks together. This results in perspectives and solutions that previously seemed impossible. Inspiration and interaction are therefore key to us. To boost this cross-fertilisation, we have set up an Experience Centre at our Rotterdam site with lots of material samples and product set-ups. Feel, experience, learn and inspire.
